HistorianLink

OPC UA HISTORY, REPORTS, DASHBOARDS AND ALARMS

HistorianLink connects as an OPC UA client to any plant historian that serves history over OPC UA, whatever the vendor, and turns its archive into data you can work with. Engineers and viewers use it from their own browsers, so there is no client software to roll out.

KEY FEATURES

- **History export.** Raw or resampled history to .xlsx or .csv, with millisecond timestamps, a plain-English quality column and UTC or local time.
- **Scheduled reports.** Repeatable report definitions run daily, weekly or monthly. The last five runs of each are kept.
- **Live dashboards.** Tiles with the current value and a sparkline, polled only while someone is watching.
- **Trend analyser.** Multi-tag chart with severity colouring, presets and a scrubbing ruler.
- **Alarms.** Current alarms over OPC UA, with an optional add-on for WinCC alarm history.
- **Access control.** Administrator, engineer and viewer roles, optional device trust and an audit trail.

AT A GLANCE

Role	OPC UA client, read-only
Works with	Any server that provides history over OPC UA
Data out	.xlsx, .csv, scheduled reports, live dashboards
OPC UA security	Basic256Sha256, Sign or SignAndEncrypt
Network users	HTTPS, TLS 1.2 minimum
Platform	Windows Server 2016+ or Windows 10+, 64-bit
Footprint	Self-contained MSI. No database, no runtime, no internet

Safe on a live historian

HistorianLink only browses tags and reads values and history. It never writes values or changes the historian's configuration.

Licensing

One perpetual licence per site, not tied to a machine. Signed licence file, checked offline. No per-tag pricing.

Free 90-day trial

Full feature set, no tag limit. Installer, manual and trial licence sent by email. Most trials are running the same day.
